

Chainlink

Chainlink is a decentralized oracle network that securely bridges blockchains and smart contracts with real-world data, enabling reliable off-chain information to power on-chain applications.

Market Capitalization

Description

By providing external information such as market prices, weather data and APIs, Chainlink enables developers to create diverse, data-driven decentralized applications. Through a system of independent node operators using LINK to provide trusted data, the network incentivizes accuracy and penalizes malicious behavior. With widespread integrations in DeFi, gaming and more, Chainlink's robust infrastructure continues to be a cornerstone for innovative, real-world blockchain solutions.

Investment Hypothesis

Chainlink's LINK token is an integral part of the security and functionality of its decentralized oracle network. Node operators use LINK as collateral to provide reliable data services, creating a strong incentive to offer accurate data feeds. Meanwhile, dApp developers use LINK to pay for access to these oracle services, driving demand for the token. Chainlink's broad partnerships and integrations across the blockchain ecosystem, including DeFi protocols, corporate blockchains and major financial institutions/systems such as SWIFT, underscore its great adoption. This ranks it as the largest oracle project by market capitalization (more than ten times the second largest project) and gives it the highest fully diluted valuation in DeFi. From an investment standpoint, Chainlink's consistent technical innovations and broad ecosystem integration further enhance its market position with a total transaction value of about €18 trillion. With 12 supported blockchains, Chainlink is well positioned to meet the growing demand for secure, decentralized oracles. Recent pro-crypto developments in the U.S. could further benefit this U.S.-based project, especially if government-led blockchain initiatives gain momentum.

Key Facts

Project Launch:	2017
Total Transaction Value:	€18 Trillion
Founder:	Sergey Nazarov and Steve Ellis
Trading Volume:	€1.35 Billion
Exchanges:	

BYBIT

coinbase
